

JEONG K. (J.K.) HONG, PH.D.

Vice President

Summary

Jeong K. Hong (J.K.) has experience managing and investigating engineering research and development programs in the offshore, shipbuilding, oil & gas, nuclear, heavy machinery, and automotive industries for more than 25 years. His main research interest areas are advanced design methods and analysis procedure development for welded structures using computational and analytical methods. He has developed unique analysis tools for characterizing residual stresses, distortions, and fatigue (a co-inventor of equilibrium-based structural stress procedures known as Verity®) in welded structures. He also has extensive research experience in weld-related issues such as mitigation techniques, repair welds, fitness for service.

Areas of Technical Expertise

- Mechanical Engineering
- Welding Engineering
- Weld Fatigue Evaluation

Education

- PhD., Welding Engineering, 1996, Ohio State University
- M.S., Mechanical Engineering, 1989, Yonsei University
- B.S., Mechanical Engineering, 1987, Yonsei University

Professional Activities

- Member, American Welding Society (AWS), 1994-present
- Member, Korean Welding and Joining Society (KWJS), 1997-present
- Member, Society of Automotive Engineers (SAE), 2010-present
- Member, American Council of International Institute of Welding (C-XIII), 2014-present
- Member, Society of Automotive Engineers (SAE), 2010-present
- Editorial Board Member, Journal of Welding and Joining, KWJS
- Session Organizer, WCX SAE World Congress Experience, SAE
- Scientific Committee Member, ASME Pressure Vessels & Piping Conference, ASME

Select Project Experience

Fatigue Projects

Structural Stress Joint Industry Program, Phase I-IV,*

Multi-client, 17+ year industry consortium program to develop and apply structural stress method organized by J.K. and co-workers. Development of fatigue evaluation procedures using structural stress method for various joint types and development of master S-N curve and weld fatigue database.

Advanced Fatigue Evaluation Procedure Development for a Structure of Excavator, Incheon, Korea.*

Providing an FE-based weld modeling recommendations for improving the capability of the weld fatigue prediction for an excavator, advanced weld fatigue evaluation procedures, and comments after reviewing the current test procedures to simulate field loading conditions

Fatigue Evaluation Procedure Development of Spot Welded, Weld-bonded, Self-Piercing Rivet (SPR), Flow Drill Screw (FDS) Joints for Automotive Structures, Gyeonggi, Korea.*

Development testing (coupons and components) and modeling procedures for spot welded, weld-bonded, self-piercing rivet, and FDS joints for automotive applications and conducting fatigue tests and construction of design master S-N curve using FE-based structural stress method and fatigue test results.

Airbag Inflator Laser Welded Failure Analysis,*

Investigation of root cause of failure of airbag inflators through observations and FE analysis.

Fatigue Prediction Evaluation Incorporating Weld Residual Stress, Peoria, IL.* Development of a predictive tool for evaluating the fatigue life of welds that are subjected to residual stresses due to welding and fabrication as well as to externally applied cyclic loads.

*Denotes work performed with previous employer.

JEONG K. (J.K.) HONG, PH.D.

Fracture Mechanics

Optimization of Hydrotesting for Vintage Liquid Lines,

Washington, DC.* Formulation of a new improved constant-depth axial-surface-crack model to predict crack growth and burst pressure using FE-based fracture mechanics analysis, and validation as compared to pipe test models.

Crack Extension Effects on Welding Residual Stress,

Multi-client,* Formulation of procedures to decide changes in residual stress with crack extension and their effect on structural integrity for various welded application cases. Comparison with existing codes/standard procedures, and recommendations provided.

Fracture Toughness of High-Temperature Alloys, Literature Review,

St. Louis, MO.* Proving an overview of currently available fitness-for-service (FFS) assessment and remaining-life prediction methodologies for Alloy 20Cr32Ni1Nb outlet manifold components and a summary of available material properties for the as-cast, as-welded, ex-service, and laboratory-aged materials from which they are fabricated.

Residual Stress

Thin Sheet Weld Simulation, Milwaukee, WI.* Development and validation of a computational weld process model for thin plate automotive applications.

Residual Stress Analysis of Repair Welds in Alloy 2195

Super-Lightweight Tank, Huntsville, AL.* Investigation of residual stress characteristics of subject welded plate (welded, repair welded, and then planished) and development of residual stress mitigation procedure due to repair welding.

Residual Stress Analysis of a Pump Casing Repair Weld and

Spine Repair Weld, Gloucester, UK.* Investigation of residual stress characteristics using finite element analysis (FEA).

Residual Stress Analysis of a Multi-Pass Repair Weld in a Test Plate, Axisymmetric Residual Stress Analysis of a Boiler Shell Repair Weld, and Management of Residual Stresses for a Boiler Shell Repair,

Scotland, UK.* Investigation of residual stress characteristics of repair welds, optimization of repair weld procedures using FEA and validation with experiments.
